

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## P R E F A C E.

---

THIS little work, the first of a series, is prepared with the belief that the simplest and easiest method of teaching arithmetic to the young pupil, is to explain to him, at the very beginning of the course of instruction, the system upon which numbers are based, and to make perfectly clear to his mind the principles which govern the different processes of numerical calculation.

With this view, the author has endeavored to render as simple as possible the explanations of the decimal system of expressing numbers, and the statement and illustration of the four elementary processes which effect the increase and diminution of numbers.

### NOTE TO THE TEACHER.

TEACHERS should read and carefully explain to the pupils, who are commencing the study of this work, each successive lesson ; and then require them to study and recite each lesson, though not of course in the same manner as they would require the more advanced classes to study and recite ; for the young pupil requires constant assistance at first, in order to acquire a clear and distinct impression of the ideas conveyed in the lesson. For this reason, familiar illustrations upon the black-board should constantly be made by the teacher, in the explanation of the advance lessons to the younger pupils.

---

THE second part of this series will be published in a short time, — containing practical exercises, both mental and written, in the application of the four elementary processes to the calculations of questions in integral numbers, both simple and compound, and in fractional parts.

## SECTION I.

### NUMERATION, OR THE NAMING OF NUMBERS.

I HAVE several marbles, and I wish to know how many I have. The name which answers the question how many is called a number. Thus suppose I take from a box of marbles a single marble, I say that I have *one* marble; — the name or number which expresses how many being in this instance *one*. If I take another marble, I must use some other name to express how many I have, for I have more than *one*, and I say I have *two* marbles, — *two* being the name or number which I use to express how many marbles I have. If I take still another marble, I must use a new name to express how many marbles there are, and I say I have *three* marbles, *three* being the number. Thus I use a new name to express how many I have, every time I take a marble from the box to place with the marbles which I already have. If I place another marble with the three marbles, the name expres-

sing how many I shall then have will be *four*. If still another, I shall have *five*; one more, and I shall have *six*; one more will make *seven*, another will make *eight*, another will make *nine*, and still another will make *ten* marbles.

The names used to express these numbers are given below, with a table representing the number of marbles expressed by each name as above given.

The pupil should be taught to count these dots thus : —

●  
One.

● ●  
One, two.

● ● ●  
One, two, three.

● ● ● ●  
One, two, three, four.

● ● ● ● ●  
One, two, three, four, five

● ● ● ● ● ●  
One, two, three, four, five, six.

● ● ● ● ● ● ●  
One, two, three, four, five, six, seven.

● ● ● ● ● ● ● ●  
One, two, three, four, five, six, seven, eight.

● ● ● ● ● ● ● ● ●  
One, two, three, four, five, six, seven, eight, nine.

● ● ● ● ● ● ● ● ● ●  
One, two, three, four, five, six, seven, eight, nine, ten.

These names are the names of the numbers, and not of the marbles, and I can count these numbers without the marbles ; thus, *one, two, three, four, five, six, seven, eight, nine, ten.*

When it is required to express more than *ten*, other names are used which are names of the numbers larger than *ten* ; thus the number one greater than *ten* is called *eleven*, and the number one greater than *eleven* is called *twelve*. Most of the numbers above twelve are expressed by names which are composed of the first ten numbers. Thus the number next above twelve is called *thirteen*, a name composed of the names *three* and *ten*, because *three* and *ten* make the number called *thirteen*. *Fourteen*, the next number above *thirteen*, is so called because *four* and *ten* compose that number. *Fifteen* is so named from the numbers *five* and *ten*. *Sixteen* from the numbers *six* and *ten* ; *seventeen* from the numbers *seven* and *ten* ; *eighteen* from the numbers *eight* and *ten* ; and *nineteen* from the numbers *nine* and *ten*.

*Twenty*, the next number above *nineteen*, is so called because it contains *two tens*. Then follow the names of the numbers formed by adding the first nine numbers to *twenty*. Thus, the next number above *twenty* is *twenty-one* ; the next is *twenty-two* ; and so on, until the first nine numbers are added successively ; thus, *twenty-three* ; *twenty-four* ; *twenty-five* ; *twenty-six* ; *twenty-seven* ; *twenty-eight* ; *twenty-nine*. The next number above *twenty-nine* is called *thirty*, because it contains *three tens*. The next nine numbers are formed by adding the first nine numbers separately in their order to *thirty*. Thus,

they are *thirty-one* ; *thirty-two* ; *thirty-three* ; *thirty-four* ; *thirty-five* ; *thirty-six* ; *thirty-seven* ; *thirty-eight* ; *thirty-nine*. The next number above *thirty-nine* contains *four tens*, and is therefore called *forty*. The next nine numbers are formed as above by adding to *forty* the first nine numbers, and are *forty-one*, *forty-two*, and so on to the next number above *forty-nine*, which is called *fifty*, because it contains *five tens*. Then follow the numbers *fifty-one*, *fifty-two*, &c., to the number containing *six tens*, which is called *sixty*. The numbers above *sixty* are *sixty-one*, *sixty-two*, &c., to the number containing *seven tens*, which is called *seventy*. The numbers above *seventy* are *seventy-one*, *seventy-two*, &c., to *eighty*, which contains *eight tens*. The numbers above *eighty* are *eighty-one*, *eighty-two*, &c., to the number containing *nine tens*, which is *ninety*. The numbers above *ninety*, are *ninety-one*, *ninety-two*, &c., to the number containing *ten tens*, which is called *one hundred*, and which contains as many times *ten* as there are times *one* in *ten*. Thus, *one hundred* contains *ten times ten*, and *ten* contains *ten times one*.

The pupil should be taught to count the points in the following table, until he can count them with ease and rapidity.

First line	●	One	Ten
Second line	●	Two	Twenty or two tens
Third line	●	Three	Thirty or three tens
Fourth line	●	Four	Forty or four tens
Fifth line	●	Five	Fifty or five tens
Sixth line	●	Six	Sixty or six tens
Seventh line	●	Seven	Seventy or seven tens
Eighth line	●	Eight	Eighty or eight tens
Ninth line	●	Nine	Ninety or nine tens
Tenth line	●	Ten	One hundred or ten tens

All the numbers above given are merely a certain number of times *one*, or so many units; because ten is simply ten units, and any number of tens will be so many tens of units; and ten tens, which are called one hundred, are simply one hundred units.

We observe that we counted ten *ones* to make one *ten*, and ten *tens* to make one *hundred*; and in counting the numbers above one *hundred* we will pursue the same plan, and count one *hundred* over ten times in like manner; thus one *hundred* and one, one *hundred* and two, one *hundred* and three, and so on to one *hundred* and ten, one *hundred* and twenty, &c., up to two *hundred*. Then again we count on two *hundred* and one, two *hundred* and two, and so on up to three *hundred*, then in like manner to four *hundred*, to five *hundred*, to six *hundred*, to seven *hundred*, to eight *hundred*, to nine *hundred*, and ten *hundred*, which we call one *thousand*, and which is as many times greater than one *hundred* as one *hundred* is greater than ten, or as ten is greater than one. That is, one *thousand* is ten times one *hundred*; one *hundred* is ten times one *ten*, and ten is ten times one or a unit.

Now, although these different names express numbers very different in value, these numbers are still only so many units as are indicated by the given name. Thus, *ten* signifies ten units; one *hundred* signifies one hundred units; one *thousand* signifies one thousand units. We see, also, that all the different numbers from one to one *thousand*, are formed by adding one to each of the numbers from one to nine *hundred* and ninety-nine. Thus, one and one are two; two and one are three; three and one are four; and so on through all the numbers to one *thousand*, for nine *hundred* and ninety-nine, and one are one *thousand*.

## SECTION II.

## NOTATION, OR THE WRITING OF NUMBERS.

To make the expression of numbers easy and simple, signs or figures have been invented which are used instead of words. A table of the signs or figures used to express the first nine numbers is given in the following table.

1	expresses	One
2	"	Two
3	"	Three
4	"	Four
5	"	Five
6	"	Six
7	"	Seven
8	"	Eight
9	"	Nine

The pupil should be taught these signs until he can give any of them at a glance, and then he may be taught the succeeding lessons in reading numbers expressed by figures.

It will be seen that there is a figure or sign to represent each one of the numbers, or names from *one* to *nine*; but if we should represent each of the numbers from *nine* to *one thousand* by separate signs, it would be difficult to learn and remember so many different signs. Therefore a method of expressing numbers has been invented, which is upon the same plan as that which was invented for naming the numbers from *ten* to *one hundred*.

We remember that in naming the numbers from *ten* to *one hundred*, we used only the names of the first *ten* numbers, placing them

so as to express any of the numbers which we wished to name. Thus, we remember that the number which is four more than ten was named *fourteen*, because it contained *four and ten*; the number which is four more than two tens or twenty, was named *twenty-four*, because it contained *two tens and four*; and the number which is four more than forty was named *forty-four*, because it contained *four tens and four*, and so on through all the numbers to *one hundred*.

Now if we adopt the same plan, in order to express the numbers from *nine* to *one thousand*, we shall use the nine figures, 1, 2, 3, 4, 5, 6, 7, 8, 9, placed so as to express the numbers which we wish to write. Suppose we wish to write the number *ten*, which is the next number above 9, as we have no figure to express ten, we must use some of the figures which we have already learned.

We remember that in learning to name numbers, one *ten* was ten times greater than *one*, or a *unit*, and that *one hundred* was ten times greater than *one ten*, and that *one thousand* was ten times greater than *one hundred*. Now each of these different names, — *units*, *tens*, *hundreds*, *thousands*, — have different ranks, each one of which is ten times greater than the next lower.

We will make a table showing these different ranks placed in a line, beginning with the rank of *units* at the right hand, and placing next the *tens*, then the *hundreds*, and then the *thousands*, in order at the left hand. First we will show the different places which these different ranks of *units*, *tens*, *hundreds*,

and *thousands* will occupy, without writing any figures in those places; and in order to do this, we will write in each of the places this sign 0, which is called zero, which signifies nothing, and when it is found in the place of any of the ranks, units, tens, hundreds, thousands, it shows that there is no figure to be counted in that rank. We will now make the table showing the different ranks with 0 in the place of each rank. Thus,

Thousands	Hundreds	Tens	Units
0	0	0	0

In this table the first place at the right hand is the *units'* place, and any figure written in that place will express so many *units*; the next place at the left, or the next place above that of *units*, is the *tens'* place, and any figure written in that place will express *tens*. The next place at the left hand of the *tens'* place is that of *hundreds*, and any figure written in that place will express *hundreds*. The place at the left hand of the *hundreds* is that of *thousands*, and any figure written in that place will express *thousands*.

I have explained how to write the first nine numbers with figures, and now I wish to write the succeeding numbers, *ten*, *eleven*, *twelve*, *thirteen*, &c. with figures. I shall need only two places to write these numbers, because they contain only two places, the *tens'* place and the *units'* place, and the table for these two places will be thus:

Tens	Units
0	0

Now, if I wish to write the next number above nine, which is *ten*, I have only to write 1

in the *tens*' place, thus, <sup>Tens</sup>1 <sup>Units</sup>0, because 1 written in the *tens*' rank is ten times as great as 1 written in the *units*' place, and therefore is equal to *ten units* or *ten*. If I wish to write *eleven*, which contains *one ten* and *one unit*, I write 1 in the

*tens*' place and 1 in the *units*' place thus, <sup>Tens</sup>1 <sup>Units</sup>1, and I have *one ten* and *one unit* or *eleven*.

*Twelve* will be written thus, 12, because it contains *one ten* and *two units*. *Thirteen* will be written thus, 13, because it contains *one ten* and *three units*; *fourteen* thus, 14, and so on through all the numbers which contain only *tens* and *units*. The following is a table of some of the numbers from nine to one hundred, with the names of the numbers which are expressed in figures, written opposite to them.

10	expresses	Ten
11	"	Eleven
12	"	Twelve
13	"	Thirteen
14	"	Fourteen
15	"	Fifteen
16	"	Sixteen
17	"	Seventeen
18	"	Eighteen
19	"	Nineteen
20	"	Twenty or two tens
21	"	Twenty-one
22	"	Twenty-two

23	expresses	Twenty-three, and so on to
29	"	Twenty-nine
30	"	Thirty, or three tens
31	"	Thirty-one, and so on to
40	"	Forty or four tens
41	"	Forty-one, and so on to
50	"	Fifty or five tens
51	"	Fifty-one, and so on to
60	"	Sixty or six tens
61	"	Sixty-one, and so on to
70	"	Seventy or seven tens
71	"	Seventy-one, and so on to
80	"	Eighty or eight tens
81	"	Eighty-one, and so on to
90	"	Ninety or nine tens
91	"	Ninety-one, and so on to
99	"	Ninety-nine.

The next number to be expressed is *one hundred*, which is equal to *ten tens*. Therefore as *ten tens* make *one hundred*, I write 1 in the *hundreds'* place, and that will express *one hundred*.

Hundreds  
Tens  
Units  
 Thus, 1 0 0 expresses *one hundred*.

All the numbers from one hundred to two hundred contain *one hundred* and a certain number of tens and units, and they can be expressed by writing 1 in the *hundreds'* place, and the *tens* and *units* in their own places. Thus,

101	expresses	One hundred and one
102	"	" " " " two
103	"	" " " " three

	109	expresses	One	hundred	and	nine
	110	"	"	"	"	ten
	111	"	"	"	"	eleven
	112	"	"	"	"	twelve
	113	"	"	"	"	thirteen
and so on to	120	"	"	"	"	twenty
	121	"	"	"	"	twenty-one
and so on to	130	"	"	"	"	thirty
	131	"	"	"	"	thirty-one
and so on to	140	"	"	"	"	forty
	to 200	"	Two	hundred		
	to 300	"	Three	hundred		
	to 900	"	Nine	hundred		
	to 999	"	Nine	hundred	and	ninety-nine

The next number above 999 is *one thousand*, which is equal to *ten hundreds*, and therefore is expressed by writing 1 in the *thousands'* place, because *ten hundreds* make *one thousand*. Thus,

1000 expresses *one thousand*.

---

The pupil should be exercised carefully in reading the above numbers, and then learn to answer the following questions upon the foregoing sections; the teacher using the black-board whenever the question requires it.

1. How many units make one ten?
2. How many tens make one hundred?
3. How many hundreds make one thousand?
4. How many units make one hundred?
5. How many units make one thousand?
6. How many places are required to write units?
7. How many places are required to write tens?
8. How many places are required to write hundreds?
9. How many places are required to write thousands?
10. What do I write in those places in any number where there are no figures to be written?
11. How shall I write 5 units?
12. How shall I write 5 tens or fifty?
13. How shall I write 1 hundred?

14. How shall I write 1 thousand?
15. What do the zeros mean in 1000?
16. How many times greater is 1 in the thousands' place, than 1 in the hundreds' place?
17. How many times greater is 5 in the hundreds' place, than 5 in the tens' place?
18. How many times greater is 5 in the tens' place, than 5 in the units' place?
19. How many times greater is 5 in the hundreds' place, than 5 in the units' place?
20. How many times greater is 1 in the thousands' place, than 1 in the units' place?
21. How shall I write eleven?
22. How many times greater is the left hand 1 than the right hand 1?
23. How shall I write twenty-two?
24. How many times greater is the 2 in the left hand place in 22, than the 2 in the right hand place?
25. How shall I write one hundred and eleven?
26. How many times greater is the left hand 1 in 111, than the right hand 1?
27. How shall I write one thousand one hundred and eleven?
28. How many times greater is the left hand 1 than the right hand 1, in one thousand one hundred and eleven?
29. How shall I write one hundred and ninety-nine?
30. How many times greater is the left hand 9 in 999 than the right hand 9?
31. How shall I write one thousand and one?
32. How shall I write one thousand and ninety?
33. In what place is the right hand 1 in 1010?
34. In what place is the left hand 1 in 1010?
35. What does the right hand zero mean in 1010?
36. What does the left hand zero mean in 1010?
37. How shall I write fifteen? how shall I write twenty-five?
38. How shall I write one hundred and one?
39. How shall I write two hundred and seventy-five?
40. How shall I write nine hundred and ninety?
41. How shall I write one thousand eight hundred and forty-nine?

The pupil after having been thoroughly exercised in the foregoing questions, may proceed to the third section.

## SECTION III.

## ADDITION.

WE remember that in naming the numbers, we called one and one, two ones or two ; that we called two and one, three ones or three ; and that three and one we called four ; four and one, five, and so on. Now we see that all the numbers above one are formed by adding several ones together, thus : one added to one makes two ; one added to two ones or two makes three ; one added to three ones makes four ; one added to four makes five ; one added to five makes six ; one to six makes seven, and one makes eight, and one makes nine, and one more makes ten.

Now if I write two ones, 1, 1, and then write two more ones, 1, 1, how many ones will be written in all? Counting all the ones, I find that there are four ones, or four ; therefore two and two equal four. If I write three ones 1, 1, 1, or 3 upon the *board*, and then write three more ones 1, 1, 1, or another 3, how many ones will there be in both 3s? Counting the ones, I find there are six ones in both 3s ; therefore 3 and 3, or 3 added to 3, are equal to six. If I write four ones 1, 1, 1, 1, or 4, and then write two ones 1, 1, or 2, how many ones will there be in both these numbers? Counting, I find there are six ones or 6 in 4 and 2 ; therefore, 4 added to 2 are equal to 6. If I write five ones, 1, 1, 1, 1, 1, or 5, and 1 upon the board, how many will be written in both numbers? Counting, I find there are six, therefore 5

added to one are equal to 6. If I write the numbers 5, 2, and 1, how many shall I have written in all? Counting, I find there are eight in all; therefore 5 added to 2 added to 1 are equal to 8.

The pupil may now be thoroughly exercised in the following tables.

1. 1 and 1 are 2	26. 6 and 3 are 9
2. 2 and 1 are 3	27. 7 and 3 are 10
3. 3 and 1 are 4	28. 8 and 3 are 11
4. 4 and 1 are 5	29. 9 and 3 are 12
5. 5 and 1 are 6	30. 10 and 3 are 13
6. 6 and 1 are 7	
7. 7 and 1 are 8	31. 1 and 4 are 5
8. 8 and 1 are 9	32. 2 and 4 are 6
9. 9 and 1 are 10	33. 3 and 4 are 7
10. 10 and 1 are 11	34. 4 and 4 are 8
	35. 5 and 4 are 9
11. 1 and 2 are 3	36. 6 and 4 are 10
12. 2 and 2 are 4	37. 7 and 4 are 11
13. 3 and 2 are 5	38. 8 and 4 are 12
14. 4 and 2 are 6	39. 9 and 4 are 13
15. 5 and 2 are 7	40. 10 and 4 are 14
16. 6 and 2 are 8	
17. 7 and 2 are 9	41. 1 and 5 are 6
18. 8 and 2 are 10	42. 2 and 5 are 7
19. 9 and 2 are 11	43. 3 and 5 are 8
20. 10 and 2 are 12	44. 4 and 5 are 9
	45. 5 and 5 are 10
21. 1 and 3 are 4	46. 6 and 5 are 11
22. 2 and 3 are 5	47. 7 and 5 are 12
23. 3 and 3 are 6	48. 8 and 5 are 13
24. 4 and 3 are 7	49. 9 and 5 are 14
25. 5 and 3 are 8	50. 10 and 5 are 15

- |                     |                       |

 9 and 6 and 7 are 22  
 9 and 7 and 8 are 24  
 9 and 8 and 9 are 26  
 9 and 9 and 10 are 28

10 and 1 and 2 are 13  
 10 and 2 and 3 are 15  
 10 and 3 and 4 are 17  
 10 and 4 and 5 are 19  
 10 and 5 and 6 are 21  
 10 and 6 and 7 are 23  
 10 and 7 and 8 are 25  
 10 and 8 and 9 are 27  
 10 and 9 and 10 are 29  
 10 and 10 and 10 are 30

1. If I read two pages of a book in the morning, and two pages in the evening; how many pages shall I read in the day?

2. 2 and 2 are how many?

3. James received two cents from his brother, and three cents from his father; how many cents did he receive?

4. 2 and 3 are how many? 3 and 2 are how many?

5. William paid two cents for a pencil, and four cents for a slate; how many cents did he pay for both?

6. 2 and 4 are how many? 4 and 2 are how many?

7. If you walk two miles in one day, and five miles in the next day; how many miles will you walk in the two days?

8. 2 and 5 are how many? 5 and 2 are how many?

9. If I perform two examples in Arithmetic, and James performs six examples; how many examples shall we both perform?

10. 2 and 6 are how many? 6 and 2 are how many?

11. William caught two robins and seven blackbirds, how many birds did he catch in all?

12. 2 and 7 are how many? 7 and 2 are how many?

13. If a horse walks two miles in one hour, and then trots eight miles in the next hour; how many miles will he have travelled?

14. 2 and 8 are how many? 8 and 2 are how many?

15. James won two marbles of William, and nine marbles of George; how many marbles did he win?

16. 2 and 9 are how many? 9 and 2 are how many?

17. George received two flowers from his father, and Jane received ten flowers from a gardener; how many did they both receive?

18. 2 and 10 are how many? 10 and 2 are how many?

19. If a miller sell three bushels of corn to one man, and three bushels to another man; how many bushels does he sell to them both?

20. 3 and 3 are how many?

21. George bought two fishing lines ; in one line there were three yards, and in the other line there were four yards ; how many yards were there in both ?

22. 3 and 4 are how many ? 4 and 3 are how many ?

23. A flour dealer bought three barrels of flour of one man, and five barrels of another man ; how many barrels did he buy ?

24. 3 and 5 are how many ? 5 and 3 are how many ?

25. A gardener planted three trees in one row, and six trees in another ; how many trees did he plant in the two rows ?

26. 3 and 6 are how many ? 6 and 3 are how many ?

27. Charles attended a primary school three years, and a grammar school seven years ; how many years did he attend school ?

28. 3 and 7 are how many ? 7 and 3 are how many ?

29. A fowler shot three birds in the morning, and eight birds in the afternoon ; how many birds did he shoot in the whole day ?

30. 3 and 8 are how many ? 8 and 3 are how many ?

31. Jane had three books, and her mother gave her nine books ; how many books did Jane then have ?

32. 3 and 9 are how many ? 9 and 3 are how many ?

33. A farmer paid three dollars for a sheep, and ten dollars for a calf ; how much did he pay for both ?

34. 3 and 10 are how many ? 10 and 3 are how many ?

35. If you should pay four cents for an orange, and four cents for an apple; how many cents would you spend?

36. 4 and 4 are how many?

37. William has lived four years in the country, and five years in the city; how old is he?

38. 4 and 5 are how many? 5 and 4 are how many?

39. A man paid four dollars for travelling in the cars, and six dollars for travelling in the stage; how much did he expend in travelling?

40. 4 and 6 are how many? 6 and 4 are how many?

41. There were four sheep in one field, and seven sheep in another; how many sheep were there in both fields?

42. 4 and 7 are how many? 7 and 4 are how many?

43. There are four windows on one side of a house, and eight windows on another side; how many windows are there on both sides?

44. 4 and 8 are how many? 8 and 4 are how many?

45. Four boys in a class have recited, and there are nine more boys to recite; how many boys are there in the class?

46. 4 and 9 are how many? 9 and 4 are how many?

47. I paid four cents for a ball, and ten cents for a kite; how many cents did I pay for both?

48. 4 and 10 are how many? 10 and 4 are how many?

49. A lady paid five dollars for a bonnet, and five dollars for a shawl; how many dollars did she pay for both?

50. 5 and 5 are how many?

51. A boy dug five bushels of potatoes, and a man dug six bushels of potatoes; how many bushels of potatoes did they both dig?

52. 5 and 6 are how many? 6 and 5 are how many?

53. Charles had five dollars, and his father gave him seven dollars more; how many dollars did he then have?

54. 5 and 7 are how many? 7 and 5 are how many?

55. If I write five pages in one hour, and eight pages in the next hour; how many pages do I write in the two hours?

56. 5 and 8 are how many? 8 and 5 are how many?

57. A farmer had five cows, and bought nine cows more; how many cows did he then have?

58. 5 and 9 are how many? 9 and 5 are how many?

59. George had five pens, and his father gave him ten more; how many pens did he then have?

60. 5 and 10 are how many? 10 and 5 are how many?

61. If I buy six pencils at one store, and six pencils more at another store; how many pencils shall I have in all?

62. 6 and 6 are how many?

63. George received six credits from his teacher in the morning, and seven credits in the afternoon; how many credits did he receive in all?

64. 6 and 7 are how many? 7 and 6 are how many?

65. Six passengers were riding in a stage, and the driver admitted eight more; how many passengers were there then in the stage?

66. 6 and 8 are how many? 8 and 6 are how many?

67. James while going to school, gathered six flowers, and while returning home gathered nine more; how many flowers did he gather?

68. 6 and 9 are how many? 9 and 6 are how many?

69. There are six birds in one cage, and ten birds in another; how many birds are there in both cages?

70. 6 and 10 are how many? 10 and 6 are how many?

71. If seven bushels of apples grow on one tree, and seven on another tree; how many bushels of apples grow on both trees?

72. 7 and 7 are how many?

73. There are seven cords of wood in one pile, and eight cords in another pile; how many cords are there in both piles?

74. 7 and 8 are how many? 8 and 7 are how many?

75. A thief stole seven dollars from one man, and nine dollars from another; how many dollars did he steal?

76. 7 and 9 are how many? 9 and 7 are how many?

77. There are seven shelves on one side of a store, and ten shelves on another side; how many shelves are there on both sides of the store?

78. 7 and 10 are how many? 10 and 7 are how many?

79. A trader sold eight yards of cloth to one man, and eight yards more to another man, how many yards did he sell to both men?

80. 8 and 8 are how many?

81. George paid eight cents for a slate, and had nine cents remaining; how many cents had he at first?

82. 8 and 9 are how many? 9 and 8 are how many?

83. A teacher gave eight pens to one boy, and ten pens to another boy; how many pens did he give to both boys?

84. 8 and 10 are how many? 10 and 8 are how many?

85. Nine boys were sailing in a boat, and they took in nine boys more; how many boys were then in the boat?

86. 9 and 9 are how many?

87. Nine men were liberated from a prison, and ten men still remained; how many men were there in the prison at first?

88. 9 and 10 are how many? 10 and 9 are how many?

89. William paid ten cents for paper, and ten cents for pens; how many cents did he pay away?

90. 10 and 10 are how many?

1. In a primary school five pupils of the first class, six pupils of the second class, and seven pupils of the third class, study arithmetic; how many pupils study arithmetic in that school?

5 and 6 and 7 are how many? 11 and 7 are how many? 5 and 13 are how many?

2. There are in my garden six pear trees, seven apple trees, and eight peach trees; how many fruit trees are there in all?

6 and 7 and 8 are how many? 13 and 8 are how many? 6 and 15 are how many?

3. John has some English rabbits in three different pens ; seven in one, eight in another, and nine in the third ; how many had he in all ?

7 and 8 and 9 are how many ? 15 and 9 are how many ? 7 and 17 are how many ?

4. A man spent eight years of his life in France, nine years in England, and ten years in America, how old was he ?

8 and 9 and 10 are how many ? 17 and 10 are how many ? 8 and 19 are how many ?

5. A grocer sold flour for two dollars, molasses for three dollars, sugar for four dollars, and rice for five dollars ; how many dollars did he receive in all ?

2 and 3 and 4 and 5 are how many ? 5 and 4 and 5 are how many ? 2 and 7 and 5 are how many ? 5 and 9 are how many ?

6. Four laborers received payment for their labor, the first received three dollars, the second four dollars, the third five dollars, and the fourth six dollars ; how much did they receive in all ?

3 and 4 and 5 and 6 are how many ? 7 and 5 and 6 are how many ? 3 and 9 and 6 are how many ? 7 and 11 are how many ?

7. I have employed in building my house four stone-cutters, five painters, six masons, and seven carpenters ; how many workmen have I employed in all ?

4 and 5 and 6 and 7 are how many ? 9 and 6 and 7 are how many ? 4 and 11 and 7 are how many ? 9 and 13 are how many ?

8. A gentleman paid to his servant five dollars at one time, six dollars at another time, seven at another, and eight at another ; how many dollars did he pay him in all ?

5 and 6 and 7 and 8 are how many? 11 and 7 and 8 are how many? 5 and 13 and 8 are how many? 11 and 15 are how many?

9. A gentleman has in his grounds six elm trees, seven oak trees, eight chestnut trees, and nine sycamore trees; how many trees were there in all?

6 and 7 and 8 and 9 are how many? 13 and 8 and 9 are how many? 6 and 15 and 9 are how many? 13 and 17 are how many?

10. James has seven marbles, John has eight, William nine, and George ten; how many marbles have they in all?

7 and 8 and 9 and 10 are how many? 15 and 9 and 10 are how many? 7 and 17 and 10 are how many? 15 and 19 are how many?

## SECTION IV.

### SECOND METHOD OF ADDITION, OR MULTIPLICATION.

1 and 1 are 2  
Twice one are 2  
2 and 2 are 4  
Twice two are 4  
3 and 3 are 6  
Twice three are 6  
4 and 4 are 8  
Twice four are 8  
5 and 5 are 10  
Twice five are 10

6 and 6 are 12  
Twice six are 12  
7 and 7 are 14  
Twice seven are 14  
8 and 8 are 16  
Twice eight are 16  
9 and 9 are 18  
Twice nine are 18  
10 and 10 are 20  
Twice ten are 20

1 and 1 and 1 are 3	6 and 6 and 6 are 18
Three times one are 3	Three times six are 18
2 and 2 and 2 are 6	7 and 7 and 7 are 21
Three times 2 are 6	Three times seven are 21
3 and 3 and 3 are 9	8 and 8 and 8 are 24
Three times three are 9	Three times eight are 24
4 and 4 and 4 are 12	9 and 9 and 9 are 27
Three times four are 12	Three times nine are 27
5 and 5 and 5 are 15	10 and 10 and 10 are 30
Three times five are 15	Three times ten are 30

---

We see that in obtaining the answers to the above examples, each number is added several times to itself; that in answering the question (4 and 4 and 4 are how many?) we add 4 to itself twice, thus, 4 and 4 are 8, and 4 are 12; when a number is added several times to itself, as in the above example, we say that it is *multiplied*, that is, several times its own value is taken. Thus, when 4 is taken three times, it is said to be multiplied by 3. The operation by which a number is multiplied is called *Multiplication*; but *multiplication* is only a short way of adding a number several times to itself.

Now if I wish to signify that a number is to be added several times to itself; that is, if I wish to multiply a number by any other, instead of writing the number several times, and adding the numbers, I write the number to be multiplied, and after that number, the number by which it is to be multiplied. Thus, if I wish to add 5 several times to itself, suppose, for instance, that I wish to add four 5s together; instead of writing 5 and 5 and 5 and 5 are 20, I should write

5 multiplied by 4 are 20, or four times five are twenty. The following table will illustrate the multiplication of numbers.

Once 1 is 1	4 times 6 are 24
Once 2 are 2	4 times 7 are 28
Once 3 are 3	4 times 8 are 32
Once 4 are 4	4 times 9 are 36
Once 5 are 5	4 times 10 are 40
Once 6 are 6	
Once 7 are 7	5 times 1 are 5
Once 8 are 8	5 times 2 are 10
Once 9 are 9	5 times 3 are 15
Once 10 are 10	5 times 4 are 20
	5 times 5 are 25
2 times 1 are 2	5 times 6 are 30
2 times 2 are 4	5 times 7 are 35
2 times 3 are 6	5 times 8 are 40
2 times 4 are 8	5 times 9 are 45
2 times 5 are 10	5 times 10 are 50
2 times 6 are 12	
2 times 7 are 14	6 times 1 are 6
2 times 8 are 16	6 times 2 are 12
2 times 9 are 18	6 times 3 are 18
2 times 10 are 20	6 times 4 are 24
	6 times 5 are 30
3 times 1 are 3	6 times 6 are 36
3 times 2 are 6	6 times 7 are 42
3 times 3 are 9	6 times 8 are 48
3 times 4 are 12	6 times 9 are 54
3 times 5 are 15	6 times 10 are 60
3 times 6 are 18	
3 times 7 are 21	7 times 1 are 7
3 times 8 are 24	7 times 2 are 14
3 times 9 are 27	7 times 3 are 21
3 times 10 are 30	7 times 4 are 28
	7 times 5 are 35
4 times 1 are 4	7 times 6 are 42
4 times 2 are 8	7 times 7 are 49
4 times 3 are 12	7 times 8 are 56
4 times 4 are 16	7 times 9 are 63
4 times 5 are 20	7 times 10 are 70

8 times 1 are 8  
 8 times 2 are 16  
 8 times 3 are 24  
 8 times 4 are 32  
 8 times 5 are 40  
 8 times 6 are 48  
 8 times 7 are 56  
 8 times 8 are 64  
 8 times 9 are 72  
 8 times 10 are 80  
  
 9 times 1 are 9  
 9 times 2 are 18  
 9 times 3 are 27  
 9 times 4 are 36  
 9 times 5 are 45

9 times 6 are 54  
 9 times 7 are 63  
 9 times 8 are 72  
 9 times 9 are 81  
 9 times 10 are 90  
  
 10 times 1 are 10  
 10 times 2 are 20  
 10 times 3 are 40  
 10 times 5 are 50  
 10 times 6 are 60  
 10 times 7 are 70  
 10 times 8 are 80  
 10 times 9 are 90  
 10 times 10 are 100

1. There are two bird-cages in my room, and two birds in each cage ; how many birds are there in both cages ?

2 times 2 are how many ?

2. There are two carriages passing in the street, and three persons in each carriage ; how many persons are there in all ?

3 times 2 are how many ? 2 times 3 are how many ?

3. John bought four oranges, and gave two cents for each ; how many cents did he pay for all ?

4 times 2 are how many ? 2 times 4 are how many ?

4. How many dollars must I pay for five barrels of potatoes, if I give two dollars for each barrel ?

5 times 2 are how many ? 2 times 5 are how many ?

5. In the first class of a school there are six boys, and in the second class there are twice as many ; how many boys are there in the second class ?

6 times 2 are how many? 2 times 6 are how many?

6. There are two rows of trees, and seven trees in a row; how many trees are there in all?

7 times 2 are how many? 2 times 7 are how many?

7. There are two pastures, each containing eight cows; how many cows are there in both pastures?

8 times 2 are how many? 2 times 8 are how many?

8. There are two baskets of apples, and nine apples in each basket; how many apples are there in both baskets?

9 times 2 are how many? 2 times 9 are how many?

9. Ten men gave money to a poor man, each giving him two dollars; how many dollars did the man receive?

10 times 2 are how many? 2 times 10 are how many?

10. There are two boats crossing a ferry, each containing three men; how many men are there in both boats?

2 times 3 are how many? 3 times 2 are how many?

11. A number of oranges were given to three boys, and each boy received three oranges; how many oranges were distributed?

3 times 3 are how many?

12. If I can perform three examples in arithmetic in one hour; how many examples can I perform in four hours at the same rate?

4 times 3 are how many? 3 times 4 are how many?

13. Three cents were given to George, and five times as many to Charles; how many cents were given to Charles?

5 times 3 are how many? 3 times 5 are how many?

14. If there are six books in one pile, how many books are there in three piles containing three times as many books?

6 times 3 are how many? 3 times 6 are how many?

15. If three yards of cloth are required to make one coat, how many yards will be required to make seven coats?

7 times 3 are how many? 3 times 7 are how many?

16. George caught eight trout from the brook, and James caught three times as many; how many trout did James catch?

8 times 3 are how many? 3 times 8 are how many?

17. If a man can plane three boards in one hour, how many boards can nine men plane in the same time?

9 times 3 are how many? 3 times 9 are how many?

18. I have a book in which there are ten pages of prose, and three times as many pages of poetry; how many pages of poetry are there?

10 times 3 are how many? 3 times 10 are how many?

19. John bought two pencils at four cents each, how much did he pay for both?

2 times 4 are how many? 4 times 2 are how many?

20. A man sold four shawls at three dollars apiece, how much did he get for them all?

3 times 4 are how many? 4 times 3 are how many?

21. There are four acres of land in one lot, and four times as many acres in another lot; how many acres are there in the larger lot?

4 times 4 are how many?

22. A man paid four dollars apiece for five chairs; how much did he pay for them all?

5 times 4 are how many? 4 times 5 are how many?

23. How many bags of corn are there in four carts, there being six bags in each cart?

6 times 4 are how many? 4 times 6 are how many?

24. If a man can make four feet of fence in one hour, how many feet of fence can he make in seven hours?

7 times 4 are how many? 4 times 7 are how many?

25. There are four boats sailing on a river, with eight men in each boat; how many men are there in all the boats?

8 times 4 are how many; 4 times 8 are how many?

26. A grocer sold four dozen of eggs at nine cents a dozen, how much did he get for the whole?

9 times 4 are how many? 4 times 9 are how many?

27. George has ten marbles, and James four times as many; how many marbles has James?

10 times 4 are how many? 4 times 10 are how many?

28. If a man should shoot five birds, and a boy twice as many; how many birds would the boy shoot?

2 times 5 are how many? 5 times 2 are how many?

29. A man gave a number of apples to five boys, giving each boy three apples; how many apples did he give to them all?

3 times 5 are how many? 5 times 3 are how many?

30. James bought four writing books at five cents each, how much did he pay for the four books?

4 times 5 are how many? 5 times 4 are how many?

31. If five sheets of paper were each cut into five equal parts, how many parts would they make?

5 times 5 are how many?

32. In the end of my house there are six windows, and in the front there are five times as many; how many windows are there in the front?

6 times 5 are how many? 5 times 6 are how many?

33. A certain farmer had seven sheep, and his neighbor had five times as many; how many sheep had his neighbor?

7 times 5 are how many? 5 times 7 are how many?

34. If a mill grinds eight bushels of corn in one hour, how many bushels will it grind in five hours?

8 times 5 are how many? 5 times 8 are how many?

34. How much money must be paid for five pounds of almonds, at the rate of nine cents a pound?

9 times 5 are how many? 5 times 9 are how many?

35. How many panes of glass are there in five windows, there being ten panes in each window?

10 times 5 are how many? 5 times 10 are how many?

36. There are two rows of houses, and six houses in a row, how many houses are there in all?

2 times 6 are how many? 6 times 2 are how many?

37. How many pens are there in three bunches, there being six pens in each bunch?

3 times 6 are how many? 6 times 3 are how many?

38. If you can read four pages in one hour, how many pages can you read in six hours?

4 times 6 are how many? 6 times 4 are how many?

39. George paid six cents for paper, and five times as much for a book; how much did he pay for the book?

5 times 6 are how many? 6 times 5 are how many?

40. How many horses are there in six stables, there being six horses in each stable?

6 and 6 are how many?

41. If a barrel of flour be worth six dollars, what is the value of seven barrels of flour?

7 times 6 are how many? 6 times 7 are how many?

42. If I recite six lessons in one week, how many lessons do I recite in eight weeks?

8 times 6 are how many? 6 times 8 are how many?

43. How many bales of cotton can be carried on six wagons, if nine bales be carried on one wagon?

9 times 6 are how many? 6 times 9 are how many?

44. If a man earns ten dollars in one week, how many dollars will he earn in six weeks?

10 times 6 are how many? 6 times 10 are how many?

45. If a horse eats two quarts of grain in one day, how many quarts will seven horses eat in the same time?

2 times 7 are how many? 7 times 2 are how many?

46. If I recite seven pages of history in one lesson, how many pages of the same do I recite in three lessons?

3 times 7 are how many? 7 times 3 are how many?

47. If a pound of coffee cost seven cents, how much will four pounds of coffee cost?

4 times 7 are how many? 7 times 4 are how many?

48. If a trader can sell flour at the rate of seven barrels in one day, how many barrels can he sell in five days?

5 times 7 are how many? 7 times 5 are how many?

49. How much must I pay for seven yards of broadcloth, the price being six dollars a yard?

6 times 7 are how many? 7 times 6 are how many?

50. How much will a market-man receive for seven dozen of eggs, if he sells them at the rate of seven cents a dozen?

7 times 7 are how many?

51. If a boat sails at the rate of seven miles in an hour, how many miles will she sail in eight hours?

8 times 7 are how many? 7 times 8 are how many?

51. If a barrel of beef be worth nine dollars, how much are seven barrels of beef worth?

9 times 7 are how many? 7 times 9 are how many?

52. If one melon cost ten cents, how many cents will seven melons cost?

10 times 7 are how many? 7 times 10 are how many?

53. If one orange cost two cents, what will eight oranges cost?

2 times 8 are how many? 8 times 2 are how many?

54. What is the value of three bags of coffee, when coffee is worth eight dollars a bag?

3 times 8 are how many? 8 times 3 are how many?

55. James paid four cents each for eight pencils, how many cents did he pay for the whole?

4 times 8 are how many? 8 times 4 are how many?

56. There are eight quarts in a peck, how many quarts are there in five pecks?

5 times 8 are how many? 8 times 5 are how many?

57. How much will six books cost at eight cents apiece?

6 times 8 are how many? 8 times 6 are how many?

58. If a ton of coal be worth eight dollars, how much are seven tons worth?

7 times 8 are how many? 8 times 7 are how many?

59. Charles has eight marbles, and James has

eight times as many, how many marbles has James?

8 times 8 are how many?

60. If a barrel of sugar costs nine dollars, how much will eight barrels of sugar cost?

9 times 8 are how many? 8 times 9 are how many?

61. If a steam engine consume eight cords of wood in one week, how many cords will it consume in ten weeks?

10 times 8 are how many? 8 times 10 are how many?

62. How many square feet are there in two boards, there being nine feet in each board?

2 times 9 are how many? 9 times 2 are how many?

63. How many books will supply nine boys, if each boy take three books?

3 times 9 are how many? 9 times 3 are how many?

64. A jeweller has nine rings which he wishes to sell at four dollars apiece, how much ought he to get for the whole?

4 times 9 are how many? 9 times 4 are how many?

65. How many seats are there in five rows, there being nine seats in a row?

5 times 9 are how many? 9 times 5 are how many?

66. How many miles will a boat sail in six hours, if she sail nine miles in one hour?

6 times 9 are how many? 9 times 6 are how many?

67. If it take nine rolls of paper to cover the walls of one room, how many rolls will it take

to cover the walls of seven rooms, of the same size?

7 times 9 are how many? 9 times 7 are how many?

68. What will nine pounds of sugar cost, at eight cents a pound?

8 times 9 are how many? 9 times 8 are how many?

69. If a hatter make nine hats in one week, how many hats will he make in nine weeks?

9 times 9 are how many?

70. How many dollars are there in nine eagles, there being ten dollars in each eagle?

10 times 9 are how many? 9 times 10 are how many?

71. Two men gave ten dollars each to a poor soldier; how many dollars did the soldier receive?

2 times 10 are how many? 10 times 2 are how many?

72. How many yards are there in three pieces of cloth, there being ten yards in each piece?

3 times 10 are how many? 10 times 3 are how many?

73. If ten yards of cloth are required to make one suit of clothes, how many yards are required to make four suits of clothes?

4 times 10 are how many? 10 times 4 are how many?

74. If a man earns five dollars in one day, how much does he earn in ten days?

5 times 10 are how many? 10 times 5 are how many?

75. How much will six pounds of lead cost, at ten cents a pound?

6 times 10 are how many? 10 times 6 are how many?

76. A farmer employs seven men, to whom he pays ten dollars each a week ; how much does he pay them all in a week ?

7 times 10 are how many ? 10 times 7 are how many ?

77. There are eight pints in one gallon, how many pints are there in ten gallons ?

8 times 10 are how many ? 10 times 8 are how many ?

78. How much must be given for nine sheep at ten dollars apiece ?

9 times 10 are how many ? 10 times 9 are how many ?

79. If I use ten sheets of paper in one day, how many sheets do I use in ten days ?

10 times 10 are how many ?

## SECTION V.

### SUBTRACTION.

WE remember that all the numbers above 1 were formed by adding 1 to each successive number ; thus (two) 2 was formed by adding 1 to 1, which made 2, and 3 was formed by adding 1 to 2, which made 3 ; 4 was formed by adding 1 to 3, and 5, by adding 1 to 4, &c. Now since these numbers were thus formed by adding 1 to each of the successive numbers, we see that we can take away 1 from any of these numbers ; thus 1 taken from 2 leaves 1 ; 1 taken from 3 leaves 2 ; and 1 taken from 4 leaves 3. This taking of one number from another we call

*subtraction* ; and when 1 is taken from any number, we say that it is *subtracted* from that number. We can *subtract* 1 from 1, or any number greater than 1, and we can also *subtract* any other number from any number which is equal to, or greater than that number ; thus we can *subtract* 1 from 1, and nothing will be left ; we can *subtract* 1 from 2, and 1 will remain ; 2 from 4, and 2 will remain. The table given below will illustrate the *subtraction* of numbers.

---

1 less 1 is	0
2 less 1 is	1
3 less 1 are	2
4 less 1 are	3
5 less 1 are	4
6 less 1 are	5
7 less 1 are	6
8 less 1 are	7
9 less 1 are	8
10 less 1 are	9
11 less 1 are	10

3 less 3 is	0
4 less 3 is	1
5 less 3 are	2
6 less 3 are	3
7 less 3 are	4
8 less 3 are	5
9 less 3 are	6

13 less 9 are 4

14 less 9 are 5

15 less 9 are 6

16 less 9 are 7

17 less 9 are 8

18 less 9 are 9

19 less 9 are 10

1. If I have four apples, and give away two of them ; how many shall I have left ?

4 less 2, are how many

2. John had five marbles, and gave two to James ; how many had John left ?

5 less 2, are how many? 6 less 4, are how many?

3. I had seven dollars in my purse, but I paid two dollars for a hat; how many dollars remained in my purse?

7 less 2, are how many? 7 less 5, are how many?

4. Eight doves were sitting on the top of the house, but two of them flew away; how many remained?

8 less 2, are how many? 8 less 6, are how many?

5. James had ten cents, but spent two of them; how many cents had he left?

10 less 2, are how many? 10 less 8, are how many?

6. George had six quarts of chestnuts, and gave three quarts of them to his sister; how many quarts had he left?

6 less 3, are how many?

7. John is seven years old, he lived three years in Boston, the rest of his life he has passed in Salem; how many years has he resided in Salem?

7 less 3, are how many? 7 less 4, are how many?

8. George is eight years old, and William is three; how many years difference are between their ages?

8 less 3, are how many? 8 less 5, are how many?

9. A man filled a cask, that contained ten gallons, with water, but three gallons leaked out; how many gallons remained in the cask?

10 less 3, are how many? 10 less 7, are how many?

10. If I have eight horses, and sell four; how many horses shall I then have?

8 less 4, are how many?

11. James had nine rabbits, but he gave four away; how many had he left?

9 less 4, are how many? 9 less 5, are how many?

12. John bought ten oranges, but gave his sister four of them; how many had he left?

10 less 4, are how many? 10 less 6, are how many?

13. James and George together had twelve cents; James's share was 5 cents, what was George's share?

12 less 5, are how many? 12 less 7, are how many?

14. A lad had eleven birds, six of them were canary birds, and the rest were sparrows; how many were sparrows?

11 less 6, are how many? 11 less 5, are how many?

15. If I have twelve lemons, and give away eight of them; how many shall I have left?

12 less 8, are how many? 12 less 4, are how many?

Thus far we have subtracted only one number from a greater number; but we can subtract two or more numbers from a number greater than their sum; thus I can subtract two and three from seven, and the remainder will be two; the expression will be thus, — 7 less 2 less 3 are 2.

16. A farmer owned six sheep, but one of them died at one time, and two of them at another; how many sheep had he left?

6 less 1 less 2, are how many? 6 less 3, are how many?

17. James had seven apples, but he gave his brother two and his sister three; how many had he then?

7 less 2 less 3, are how many? 7 less 5, are how many?

18. Eight carpenters were working upon a house, three of them left at one time and four at another; how many carpenters remained?

8 less 3 less 4, are how many? 8 less 7, are how many?

19. George had nine cents, but he gave his sister three cents, and spent four; how many cents had he left?

9 less 3 less 4, are how many? 9 less 7, are how many?

20. In my first class in school there are three divisions; the first division contains four pupils, and the second five pupils; how many pupils are in the third division, supposing that there are ten pupils in the class?

12 less 4 less 5, are how many? 10 less 9, are how many?

## SECTION VI.

### SECOND METHOD OF SUBTRACTION, OR DIVISION.

WE have in the above examples subtracted different numbers from a greater number, but it sometimes happens that we wish to subtract the same number several times from a greater number. Suppose, for instance, that I have eighteen cents, and wish to know how many quarts of chestnuts I can buy for that sum, when chestnuts

are worth six cents a quart ; I subtract six repeatedly from eighteen to find how many times six is contained in eighteen ; thus, 18 less 6 less 6 less 6 is 0 ; and I find upon subtracting six three times from eighteen that nothing remains, and, consequently, that eighteen contains six exactly three times. Suppose it were required to find how many times three are contained in twelve ; the expression will be thus, 12 less 3 less 3 less 3 is 0. The subtraction fully performed will be thus : 12 less 3 are 9, 9 less 3 are 6, 6 less 3 are 3, 3 less 3 is 0 ; here it will be seen I have subtracted 3 four times from 12, and that nothing remains ; therefore, 3 is contained in 12 four times.

There is a shorter method of finding how many times one number is contained in another, than that of repeatedly subtracting the less number from the greater, and this method is called *division* ; when I wish to find how many times a less number is contained in a greater, I divide the greater by the less, and instead of expressing the operation, by repeated subtractions, I express it by division. Thus, if it be required to express the division of 12 by 3, instead of writing it, 12 less 3 less 3 less 3 less 3, is 0, which shows that there are four 3s in 12, I should write it thus : twelve divided by three are equal to four. The expression of the division of 9 by 3 will be thus : 9 divided by 3 are equal to 3.

When any number is divided by a less number, the answer shows how many times the less number is contained in the greater number. Thus if I divide six by two, I find that two is contained in six three times, or that two is one

third of six ; if I divide a number by 2 the answer will be one half of the number which is divided ; if I divide a number by 3, the answer will be one third of that number ; if I divide a number by 4, the answer will be one fourth ; if by 5, it will be one fifth ; if by 6, it will be one sixth ; if by 7, it will be one seventh ; if by 8, it will be one eighth ; if by 9, it will be one ninth ; and if by 10, it will be one tenth.

---

The following table contains examples of the division of numbers from 1 to 100. The pupil must be thoroughly instructed in the exercises of this table.

2 are contained in 2 once.

2 divided by 2 is 1.

2 are contained in 4 twice ; 2 are one half of 4.

2 are contained in 6 three times ; 2 are one third of 6.

2 are contained in 8 four times ; 2 are one fourth of 8.

2 are contained in 10 five times ; 2 are one fifth of 10.

3 are contained in 3 once.

3 are contained in 6 twice ; 3 are one half of 6.

3 are contained in 9 three times ; 3 are one third of 9.

3 are contained in 12 four times ; 3 are one fourth of 12.

3 are contained in 15 five times ; 3 are one fifth of 15.

3 are contained in 18 six times ; 3 are one sixth of 18.

3 are contained in 21 seven times ; 3 are one seventh of 21.

3 are contained in 24 eight times ; 3 are one eighth of 24.

3 are contained in 27 nine times; 3 are one ninth of 27.

3 are contained in 30 ten times; 3 are one tenth of 30.

4 are contained in 4 once.

4 are contained in 8 twice; 4 are one half of 8.

4 are contained in 12 three times; 4 are one third of 12.

4 are contained in 16 four times; 4 are one fourth of 16.

4 are contained in 20 five times; 4 are one fifth of 20.

4 are contained in 24 six times; 4 are one sixth of 24.

4 are contained in 28 seven times; 4 are one seventh of 28.

4 are contained in 32 eight times; 4 are one eighth of 32.

4 are contained in 36 nine times; 4 are one ninth of 36.

4 are contained in 40 ten times; 4 are one tenth of 40.

5 are contained in 5 once.

5 are contained in 10 twice; 5 are one half of 10.

5 are contained in 15 three times; 5 are one third of 15.

5 are contained in 20 four times; 5 are one fourth of 20.

5 are contained in 25 five times; 5 are one fifth of 25.

5 are contained in 30 six times; 5 are one sixth of 30.

5 are contained in 35 seven times; 5 are one seventh of 35.

5 are contained in 40 eight times; 5 are one eighth of 40.

5 are contained in 45 nine times; 5 are one ninth of 45.

5 are contained in 50 ten times; 5 are one tenth of 50.

6 are contained in 6 once.

6 are contained in 12 twice; 6 are one half of 12.

6 are contained in 18 three times; 6 are one third of 18.

6 are contained in 24 four times; 6 are one fourth of 24.

6 are contained in 30 five times; 6 are one fifth of 30.

6 are contained in 36 six times; 6 are one sixth of 36.

6 are contained in 42 seven times; 6 are one seventh of 42.

6 are contained in 48 eight times; 6 are one eighth of 48.

6 are contained in 54 nine times; 6 are one ninth of 54.

6 are contained in 60 ten times; 6 are one tenth of 60.

7 are contained in 7 once.

7 are contained in 14 twice; 7 are one half of 14.

7 are contained in 21 three times; 7 are one third of 21.

7 are contained in 28 four times; 7 are one fourth of 28.

7 are contained in 35 five times; 7 are one fifth of 35.

7 are contained in 42 six times; 7 are one sixth of 42.

7 are contained in 49 seven times; 7 are one seventh of 49.

7 are contained in 56 eight times; 7 are one eighth of 56.

7 are contained in 63 nine times ; 7 are one ninth of 63.

7 are contained in 70 ten times ; 7 are one tenth of 70.

8 are contained in 8 once.

8 are contained in 16 twice ; 8 are one half of 16.

8 are contained in 24 three times ; 8 are one third of 24.

8 are contained in 32 four times ; 8 are one fourth of 32.

8 are contained in 40 five times ; 8 are one fifth of 40.

8 are contained in 48 six times ; 8 are one sixth of 48.

8 are contained in 56 seven times ; 8 are one seventh of 56.

8 are contained in 64 eight times ; 8 are one eighth of 64.

8 are contained in 72 nine times ; 8 are one ninth of 72.

8 are contained in 80 ten times ; 8 are one tenth of 80.

9 are contained in 9 once.

9 are contained in 18 twice ; 9 are one half of 18.

9 are contained in 27 three times ; 9 are one third of 27.

9 are contained in 36 four times ; 9 are one fourth of 36.

9 are contained in 45 five times ; 9 are one fifth of 45.

9 are contained in 54 six times ; 9 are one sixth of 54.

9 are contained in 63 seven times ; 9 are one seventh of 63.

9 are contained in 72 eight times ; 9 are one eighth of 72.

9 are contained in 81 nine times ; 9 are one ninth of 81.

9 are contained in 90 ten times ; 9 are one tenth of 90.

10 are contained in 10 once.

10 are contained in 20 twice ; 10 are one half of 20.

10 are contained in 30 three times ; 10 are one third of 30.

10 are contained in 40 four times ; 10 are one fourth of 40.

10 are contained in 50 five times ; 10 are one fifth of 50.

10 are contained in 60 six times ; 10 are one sixth of 60.

10 are contained in 70 seven times ; 10 are one seventh of 70.

10 are contained in 80 eight times ; 10 are one eighth of 80.

10 are contained in 90 nine times ; 10 are one ninth of 90.

10 are contained in 100 ten times ; 10 are one tenth of 100.

---

1. John has four cents ; how many slate pencils can he buy with them, paying two cents for each pencil ?

4 divided by 2, are how many ? 2 are what part of 4 ?

2. George has six apples, and wishes to divide them equally amongst his three sisters ; how many apples must he give to each ?

6 divided by 3, are how many? 6 divided by 2, are how many? 3 are what part of 6? 2 are what part of 6?

3. A gentleman gave his son eight cents with which to buy oranges; how many could he buy, if the oranges were worth two cents apiece?

8 divided by 2, are how many? 8 divided by 4, are how many? 2 are what part of 8? 4 are what part of 8?

4. There are ten birds in cages in my room, and two birds in each cage; how many cages are there?

10 divided by 2, are how many? 10 divided by 5, are how many? 2 are what part of 10? 5 are what part of 10?

5. There are twelve fruit trees in my garden, planted in two rows; how many trees are there in a row?

12 divided by 2, are how many? 12 divided by 6, are how many? 2 are what part of 12? 6 are what part of 12?

6. How many lemons can I buy for fourteen cents, if lemons are worth two cents apiece?

14 divided by 2, are how many? 14 divided by 7, are how many? 2 are what part of 14? 7 are what part of 14?

7. John paid sixteen cents for pencils, paying two cents apiece; how many pencils did he buy?

16 divided by 2, are how many? 16 divided by 8, are how many? What part of 16 are 2? What part of 16 are 8?

8. In a gentleman's grounds there are eighteen rose bushes, in two rows; how many rose bushes are there in a row?

18 divided by 2, are how many? 18 divided

by 9, are how many? What part of 18 are 2?  
What part of 18 are 9?

9. Two gentlemen paid twenty dollars at a hotel for their expenses; how much did each pay, supposing that they divided the bill equally between them?

20 divided by 2, are how many? 20 divided by 10, are how many? What part of 20 are 2? What part of 20 are 10?

10. John had nine marbles; and wished to divide them equally amongst his three brothers; how many did he give to each?

9 divided by 3, are how many? What part of 9 are 3?

11. A gentleman bought for twelve dollars three dresses of equal value for his three daughters; how much did each dress cost?

12 divided by 3, are how many? 12 divided by 4, are how many? 3 are what part of 12? 4 are what part of 12?

12. For fifteen dollars how many hats can I buy, paying three dollars for each hat?

15 divided by 3, are how many? 15 divided by 5, are how many? 3 are what part of 15? 5 are what part of 15?

13. I paid eighteen dollars for wood, paying three dollars for a cord; how many cords did I buy?

18 divided by 3, are how many? 18 divided by 6, are how many? What part of 18 are 3? What part of 18 are 6?

14. A gentleman gave twenty-one dollars to his workmen, giving three dollars to each; how many workmen had he?

**Recommendations from Practical Teachers.**

"I have used your books in school the past summer, and have been highly pleased with them. I find it easy to enlist the attention of any child, and he will invariably take a deep interest in their perusal. I believe, most sincerely, that the general train of thought excited by the lessons, and kept up by the questions at the close, tends to elevate and improve the morals, and to form loftier habits of independent thought."

M. A. FRENCH, *Clarendon, Vt.*

"I am using the 'Moral Instructor' in my school. My scholars are much interested in reading the lessons. I think them well adapted to the capacity of children. The questions I consider a great aid in following out the train of thought and ideas connected with the lessons; and I feel convinced that they produce a good moral effect upon the mind of the child."

"The questions are of such a nature that they cannot be answered by the memory merely; consequently the scholar acquires a habit of independent thought. I know of no Reading Book, as well suited to the capacity of children, or as well calculated to produce a happy effect on their morals, or one in which children would take a more lively interest than in the *Moral Instructor*."

H. G. THOMAS, *Cuttingsville, Vt.*

"Having for several seasons used the *Moral Instructor* in public schools, I esteem it a duty and a pleasure to express my highest approbation of the work. I have found it to be a progressive series, adapted to the capacity of children. The questions I regard as calculated to excite and produce independent thought. My pupils, in general, have taken a deep interest in the lessons; not merely in relation to the story, but more especially to the moral instruction. This has often been visible in the deportment of scholars to each other and to their teacher."

M. LEONARD, *Pittsford, Vt.*

"I have used the *Instructor* in the last three schools in which I have been engaged; and in the last two I was enabled to introduce it but partially, as the pupils were in part supplied with other books, so that in those cases I have had a favorable opportunity for observing the comparative merits of the work. I have, therefore, no hesitation in saying that the work has, for children, decided advantages over any other work that I have seen. I think it perfectly evident that independent thought is the result of the lessons, from the fact, that with very little experience in answering the questions, they give the ideas promptly, and in words strictly their own, as they are in some measure obliged to do."

T. BOND, *Castleton, Vt.*

"Palmer's *Moral Instructor*, in four parts, is a work designed to develop and bring into virtuous activity the moral principles. Such a work appears to be eminently needed; and the author has accurately conceived his subject, and clothed his views in a style which will be forever attractive to Juvenile Learners. The reputation of the Author of the Prize Essay upon Education is fully sustained in this work."

JAMES HENRY, JR.,

*Superintendent of Common Schools for the County of Herkimer, N. Y.*
